SUMMARY

A results-driven Software Quality Assurance Engineer with experience ensuring the quality of web, mobile, and API-driven applications. Brings a strong understanding of the SDLC and Agile/Scrum practices, with hands-on expertise in test case creation, test execution, and detailed defect reporting. Proactively identifies weaknesses in testing processes and recommends practical improvements to enhance software reliability.

WORK EXPERIENCE

TestIO GmbH - Software Quality Assurance Tester

April 2023 - Present

- Performed end-to-end and exploratory testing across real devices and environments to uncover critical functional and usability defects ahead of release, improving product confidence and release readiness.
- Reported clear, reproducible bug reports with detailed steps, screenshots, and context that accelerated bug triage and developer fixes within Agile cycles.
- Designed and executed structured test cases from acceptance criteria across web and mobile platforms to validate new features and regression stability.
- Collaborated with cross-functional teams to refine test focus and prioritize high-impact defects that strengthened overall user experience and product quality.

Digivante - Software Quality Assurance Tester

Aug 2024 - Present

- Executed manual and exploratory testing across web and mobile applications to uncover functional, usability, and user experience issues before release.
- Designed and executed end-to-end and regression test scenarios to validate application stability across devices, browsers, and updates.
- Created clear, actionable defect reports with reproducible steps and supporting evidence, enabling faster triage and resolution by development teams.
- Developed test cases directly from acceptance criteria, improving test coverage and reducing the risk of missed requirements.
- Analyzed test outcomes and usability findings to provide practical insights that improved product quality, release confidence, and overall user experience.

TesterWork - Software Quality Assurance Tester

Jan 2024 - Present

- Led comprehensive manual testing across web, mobile, and backend environments to identify, document, and prioritize software defects, enhancing overall product stability and user satisfaction.
- Communicated potential issues directly with development teams and created structured tickets to ensure bugs were tracked, verified, and resolved efficiently within Agile/Scrum cycles, supporting continuous delivery.
- Conducted end-to-end and regression testing across desktop and mobile platforms to verify functional integrity and confirm consistent behavior after updates and fixes.
- Authored detailed, acceptance-criteria-aligned test cases to validate new features and enhancements, improving test coverage and reducing post-release defects.
- Revamped test execution workflows to improve throughput and efficiency while maintaining rigorous quality standards, contributing to faster feedback loops.

SKILL SUMMARY

- Manual Testing: Regression, End-to-End, Exploratory, Usability, Cross-Browser & Cross-Device Testing
 - Test Design & Execution: Test case creation, test plan development, test optimization
 - Automation & Tools: Selenium, Postman, JUnit/TestNG, Git, CI/CD basics
 - Bug Tracking & Collaboration: Jira, Agile/Scrum methodologies
 - Analysis & Reporting: Defect analysis, usability matrices, coverage assessment
 - Soft Skills: Problem-solving, attention to detail, communication, cross-functional collaboration
-

EDUCATION

FEDERAL UNIVERSITY OF TECHNOLOGY, AKURE

Oct 2025

Bachelor's Degree in Statistics (B.Tech)

PROJECTS

Open Cart Demo App Automation Testing Project | QA Automation Engineer

I developed and executed end-to-end test cases for an OpenCart e-commerce application using both manual testing and automation testing methodologies. I built a hybrid automation framework using Java, Selenium WebDriver, TestNG, Maven, and Page Object Model (POM) architecture. Automated critical user workflows, including registration, login, logout, product validation, and checkout functionalities. I implemented data-driven testing for scalable test execution and reusable test scenarios. Performed functional testing, regression testing, UI validation, cross-browser testing, and defect reporting. Generated TestNG execution reports and maintained structured test documentation, reusable test scripts, and execution logs using Git/GitHub version control.

BlazeDemo Flight Booking Automation Testing Project | QA Automation Engineer

I designed and executed manual and automated test cases for a flight booking web application using Java, Selenium WebDriver, TestNG, and Maven. I built a scalable hybrid automation framework using Page Object Model (POM) and data-driven testing to automate end-to-end workflows, including flight search, booking validation, and price verification, improving test execution efficiency and reducing repetitive manual testing effort by over 70%. I performed functional, regression, UI, and cross-browser testing while maintaining reusable test scripts, execution reports, defect tracking, and structured test documentation using Git/GitHub version control.

SauceDemo E-Commerce Automation Testing Project

I designed and executed both manual and automated test cases for the SauceDemo e-commerce application using Java, Selenium WebDriver, TestNG, and Maven. I developed a scalable Hybrid Automation Framework using Page Object Model (POM) and Data-Driven Testing to automate critical user workflows such as login validation, product selection, cart management, checkout, and order confirmation. I performed functional, regression, UI, negative, and cross-browser testing while maintaining reusable test scripts, execution reports, defect tracking, and structured test documentation using Git/GitHub. The framework improved test execution efficiency and reduced repetitive manual testing efforts by over 75%.
